Dear sir and Madam:

I called you over two months ago about your product for toenail fungus and purchased it. I'm letting you know that it is working. The infection is in the large toenail so will take some months to completely grow out but but new uninfected nail is growing from the base, it is about a third grown out now. I had this infection for 11 years and tried so many things. When I first knew it was a fungal infection I thought of spraying it with lysol spray which is antifungal and it was working very well. When it was almost to the point where it was almost grown out I stopped the treatment thinking the fungus was dead then it soon began to spread down again and when I resumed the treatment it was more resistant and did not work. Since then I tried many things such as javex, teatree oil, pinesol, vinegar and apple cider vinegar... with no success. I am very happy to be finally getting rid of this problem and would like to add that I also used it for one week on the other four nails, although the nails were not infected the skin around the nail was always growing fungus and would not clear no matter what product I applied, now this problem has also been eliminated with your product. Thank you Carolyn Lebano.
